

## Napkin Presentation Feedback

1. N/A
2. N/A
3. Might be a little hard to read. Eye strain. Is it important to show ALL of the industries? A bit much if only focusing on the top 3. Maybe only include 10-15. Maybe omit the ones in the middle.
4. Bins are kinda weird. Why not even numbers? (Answer: Freedman Diaconas Rule- Really good in practice to come up with number of bins to use) Extend X-Axis to begin and end on even numbers. 40-230?
5. Lots of Clutter Here. Maybe removed the 2 exchanges in NY and Illinois. Order states by highest average salary.
6. Redo graphs without NY to show more range. Could be fine though. Number 2 and 3 are not obvious.
7. Add: use some blank space to indicate what the outliers are. Use text and arrows pointing to points far from the line.
8. No comment
9. No colors or add legend and color blind friendly.
10. Might be a little hard to read with all the states at the bottom but it is simple enough were he thinks people will get the idea.
11. No comment
12. Great
13. I'm having trouble understanding these. Why is there a dot very high up in the chart(in power BI you can hover to see more information. This is just screenshot of a dashboard) Most complex chart, make sure to explain all these things. Maybe label some dots
14. Because the top left chunk is so much darker, attention is drawn away from weak correlations are. Maybe don't show the top left corner.
15. Not sure if it's necessary to show the rows of data at the top.
